- **Safety:** Three-point child or baby car seat attachment

## **Reliability:**

- More than **30 Years of Rental Experience**

Travel and sleeping capacities are sometimes not identical. This is why we specify the number of seatbelts installed in each vehicle type. It is not allowed to travel with more people in the vehicle than the number of seatbelts installed.

We also specify the number of sleeping capacity. The sleeping capacity may not correspond with the number of seatbelts installed. Sometimes, customers want to just travel in the motorhomes but not sleep in the unit or sometimes, customers want to use the full sleeping capacity and use a second vehicle to allow for travel capacity for the entire group. For such cases, it is important to exactly know what a vehicle offers.

If we state a sleeping capacity of 5 – 6, then 6 adults could sleep in the camper and up to 5 people is the maximum possible capacity.

We calculate the sleeping capacity as follows:

Double bed = 2; Cab over bed = 2; Dinette = 1 adult or 2 children

We reserve the right to refuse delivery of a vehicle to a customer, should the group exceed the number of seat belts installed.

# RV VEHICLE SPECIFICATIONS

All dimensions and capacities are approximate and may change without notice.
